# ATX Sovereign Voice AI Stack

**Private voice AI for regulated industries, hosted or on your own infrastructure**

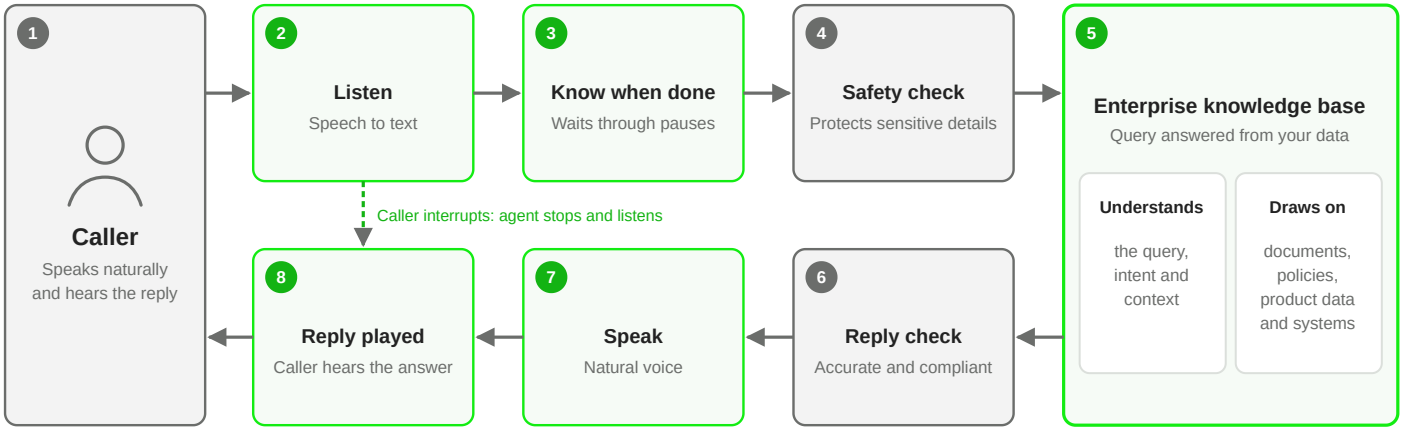

Private voice AI stack, hosted or local, that powers agentic AI applications in regulated industries such as BFSI, healthcare and government. Natural, human-like conversations across languages, with every component under your control. It embeds into your business workflows and use cases across domains.

## Listen, think, speak: one private stack

Speech recognition, an agent layer and speech synthesis, deployed as one unit on infrastructure you choose.

| Listen | Think | Speak |
|---|---|---|
| Streaming, multilingual speech to text | Answers from your enterprise knowledge base | Natural, human-like voice |

## How it works

## Built for regulated, real-time voice

**No loss of data or IP.** Audio, transcripts and models stay inside your boundary.

**POC ready.** For Indic, EU and UK English use cases.

**Interrupt handling.** Callers can cut in anytime; the agent stops and listens.

**Built for regulators.** Data residency, audit trails and access control built in.

**Natural, configurable flow.** Conversation flows set up to match your use case.

**Low latency.** Replies start almost instantly, so live calls flow like a natural conversation.

## Get started

| On-premises | Private cloud | ATX-hosted |
|---|---|---|
| Your data center | Your VPC, your region | Dedicated, single-tenant |

Start with a pilot on one use case.
